Open Ecosystem Initiatives

Build Open Hardware

Participate in open hardware foundations by contributing designs and providing spec feedback.

Validate Open Software Platforms

Collaborate with software consortium partnerships to test SDDC solutions driven by customer requirements.

Deliver Integrated Solutions

Combine HW / SW design experience with automated validation framework to deliver robust platform solutions.

Open Standards Engagement Lab

Integration Requirements

- Multiple technology Partners
- Established worldwide supply chain
- Sketch-to-Scale technology enablement
- Distribution, service, repair, and reverse logistics

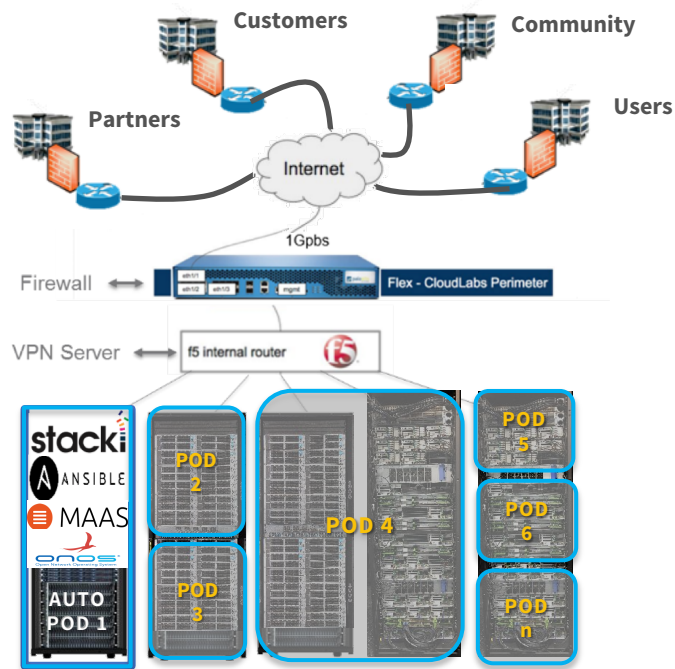

Validation Requirements

- Stack Validation
- Performance Testing
- Latency reduction
- No Vendor Lock-In
- New applications

<https://flexcloudlabs.com>

ONF Reference Designs Validation on OCP Platforms

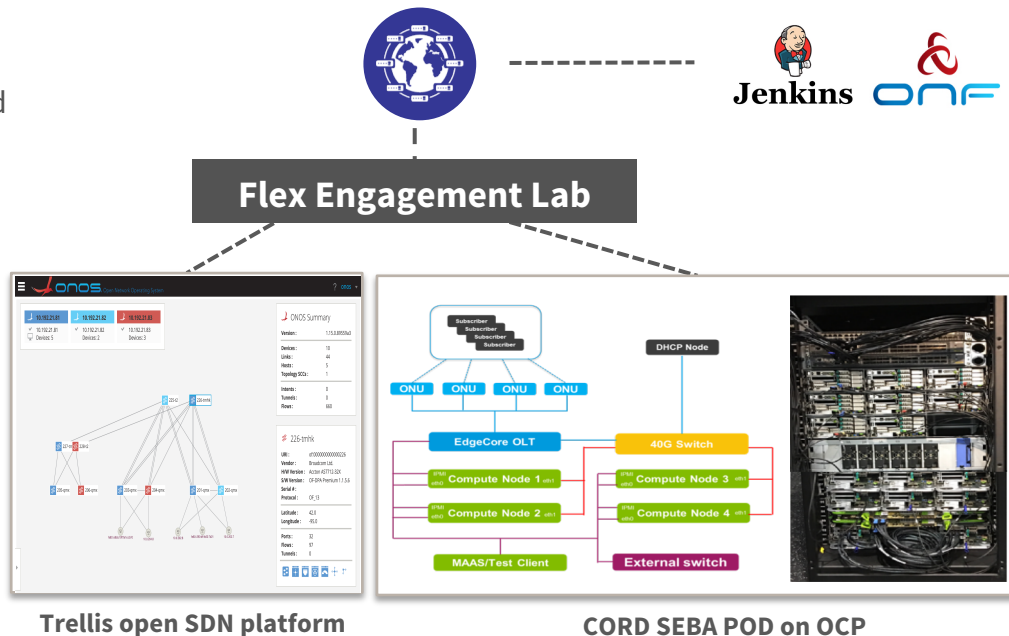

- Flex currently deploying multiple integrated stacks for telco use cases
- Running on multi-vendor OCP hardware
- Validating with partner tools & Flex FAST
