

Hyperscale

Flexibility & Efficiency For Everyone

Scale Storage Independently

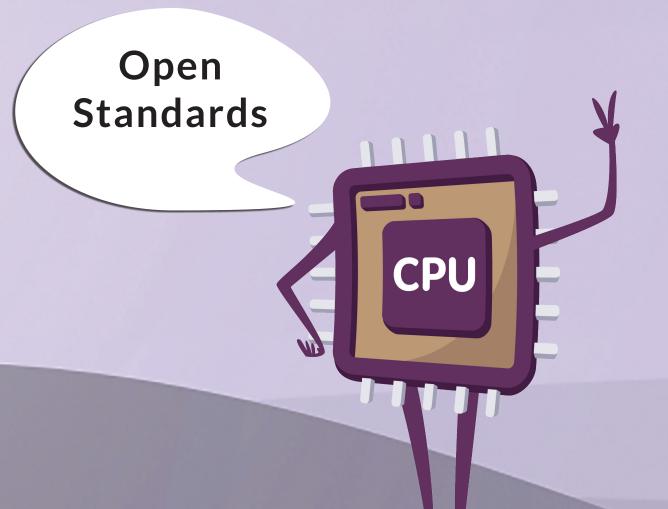

SSD

C

Standard NVMe/TCP

Always Available Clustered High Performance Storage

- Standard Ethernet, TCP/IP Network interfaces
- NVMe drive data protection/rebuild (EC)
- Logical Volumes with:
 - Thin provisioning
 - Line-speed Compression
- Selectable redundancy
- HA Clustering and failover for protection against storage server failures
- Advanced Flash Pool Management
 - Extends the life of TLC and QLC Media
 - QoS: Consistent latency, optimal IO placement engine
