# Today's Agenda

Time	Topic
11.00am	Welcome Address
11.05am	Introduction of the open source hardware model and discussion with chair of OCP Incubation Committee
11.15am	Quick Peeks of OCP Projects & OCP Market: <ul style="list-style-type: none"><li>• Open source servers, storage &amp; networking</li><li>• Drivers of OCP adoption</li></ul>
11.30am	Energy and cost efficiencies through open source hardware in Telco's and CSPs  Q&A with an OCP Solution Provider – CTC Japan
11.45am	Closing address and key interests in Session 2 and 3

Creative Destruction - the process of breaking older conventions to accelerate movement to the future, without cutting off from the past.

*Joseph Shumpeter (Economist)*

# OEM

(Original Equipment Manufacturer)

Buys platform components  
from the manufacturer

Resells those components  
under their own brand name

Create products that can server  
the broadest possible market

Support and managed  
services

# ODM/White Box

(Original Design Manufacturer or White Box)

Manufactures platform  
components

Provide full product  
development services

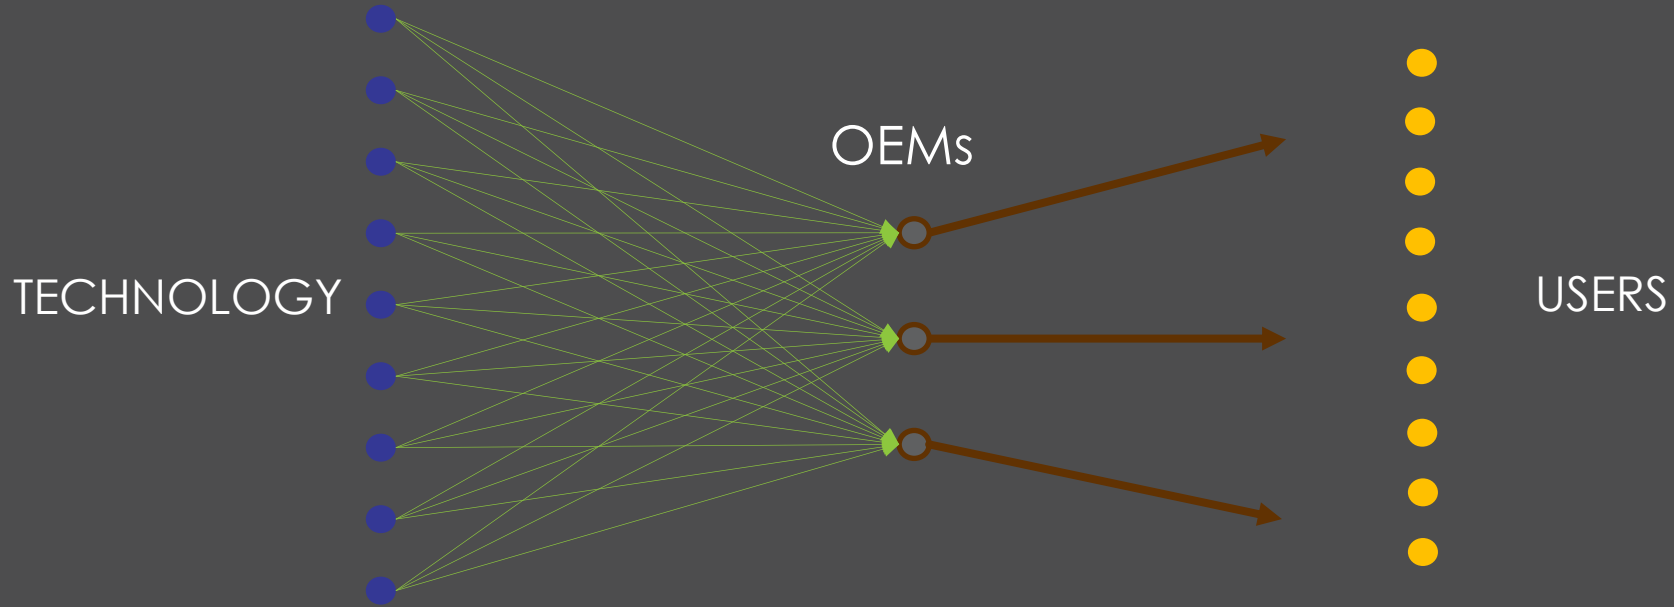

Can manufacture  
specialised solutions

Support centred on  
product

# ODM/White Box + Open Source

# The old innovation pipeline

# Reinvention...or “Creative Destruction”

January 2010

COMPANIES > FACEBOOK

## Facebook to Build Its Own Data Centers

Facebook has decided to begin building its own data centers, and may announce its first facility as soon as tomorrow. The fast-growing social network has previously leased server space from wholesale data center providers.

Rich Miller | Jan 20, 2010

What can we remove from the system?

Can we raise operating temperatures and have the servers survive?

Can we increase relative humidity operational ranges to make the system much more efficient?

Do we need a centralized power supplies?

# Open Compute Project

A collaborative community focused on redesigning hardware technology to efficiently support the growing demands on compute infrastructure.

# Open. For Business.

The Open Compute Project (OCP) is reimagining hardware, making it more efficient, flexible, and scalable. Join our global community of technology leaders working together to break open the black box of proprietary IT infrastructure to achieve greater choice, customization, and cost savings.
