8.1.1. SERVICE ROOT

Service Root resource is the entry point to the Redfish interface. The property details are available in the ServiceRoot.xml metadata file.

GET

Request:

GET /redfish/v1
 Content-Type: application/json

Response:

```

{
  "@odata.context": "/redfish/v1/$metadata#ServiceRoot.ServiceRoot",
  "@odata.id": "/redfish/v1/",
  "@odata.type": "#ServiceRoot.v1_1_1.ServiceRoot",
  "Id": "RootService",
  "Name": "Root Service",
  "Description": "description-as-string",
  "RedfishVersion": "1.1.0",

```

```

"UUID": "92384634-2938-2342-8820-489239905423",
"Chassis": {
  "@odata.id": "/redfish/v1/Chassis"
},
"Managers": {
  "@odata.id": "/redfish/v1/Managers"
},
"EventService": {
  "@odata.id": "/redfish/v1/EventService"
},
"Tasks": {
  "@odata.id": "/redfish/v1/TaskService"
},
"TelemetryService": {
  "@odata.id": "/redfish/v1/TelemetryService"
},
"Registries": {
  "@odata.id": "/redfish/v1/Registries"
},
"UpdateService": {
  "@odata.id": "/redfish/v1/UpdateService"
},
"Links": {}
}

```

8.1.7. UpdateService

UpdateService resource represents the properties required to invoke the software/firmware update.

Note: In the current release, only the Manager Resources can be updated.

GET

Request:

GET /redfish/v1/UpdateService
 Content-Type: application/json

Response:

```

{
  "@odata.type": "#UpdateService.v1_0_2.UpdateService",
  "Id": "UpdateService",
  "Name": "Update service",
  "Status": {
    "State": "Enabled",
    "Health": "OK",
    "HealthRollup": "OK"
  },
  "ServiceEnabled": true,
  "Actions": {
    "#UpdateService.SimpleUpdate": {
      "target": "/redfish/v1/UpdateService/Actions/SimpleUpdate",
      "@Redfish.ActionInfo": "/redfish/v1/UpdateService/SimpleUpdateActionInfo"
    },
  },
  "@odata.context": "/redfish/v1/$metadata#UpdateService/Entity",
}

```

ACTION VIA POST: SIMPLEUPDATE

The UpdateService resource specifies that firmware can be updated by POSTing to the SimpleUpdate resource. The parameters that can be passed in the request content is described in the SimpleUpdateActionInfo resource.

```

"#UpdateService.SimpleUpdate": {
  "target": "/redfish/v1/UpdateService/Actions/SimpleUpdate",
  "@Redfish.ActionInfo": "/redfish/v1/UpdateService/SimpleUpdateActionInfo"
},

```

Request:

GET /redfish/v1/UpdateService
 Content-Type: application/json

Request Content:

```

{
  "ImageURI": "http://10.0.0.1/images/rmm_image.deb",
  "Targets": [ "/redfish/v1/Managers/BMC" ],
  "TransferProtocol": "HTTP"
}

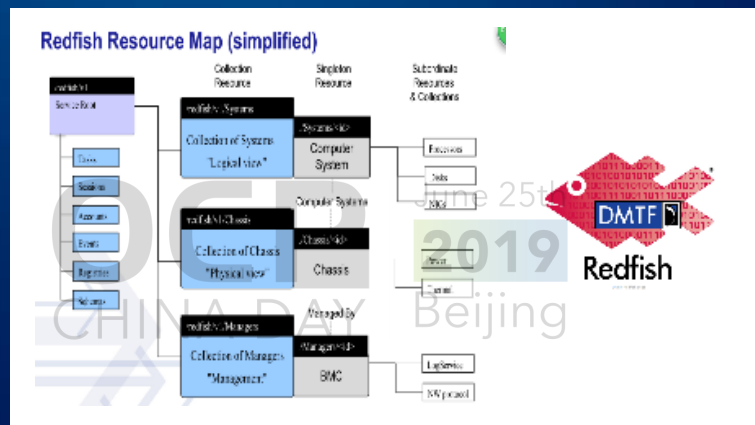

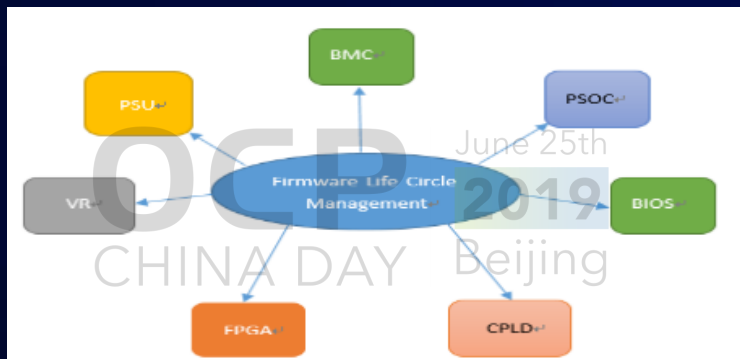

```

WebUI to monitor system status

Component **Firmware Life cycle Management**

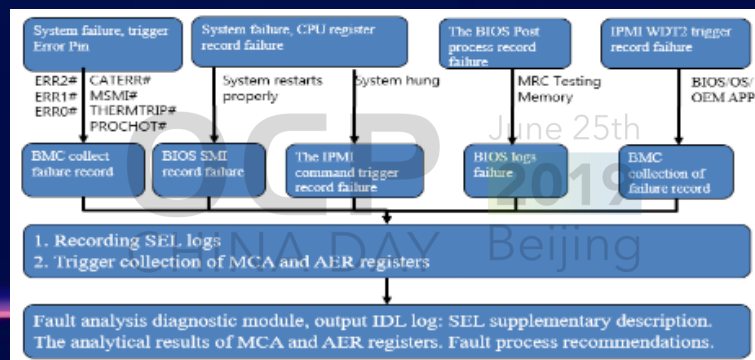

1. Version auto discovery
2. Intelligent update for BMC, BIOS, CPLD, FPGA etc.
3. Firmware rollback when error occurs.

Redfish/Restful Function, support Redfish OCP Baseline Profile

Fault Diagnosis

1. Diagnosis system fault directly
2. Output the detailed fault records and recommendations
3. BMC subsystem fault diagnosis.

RMC Diagram

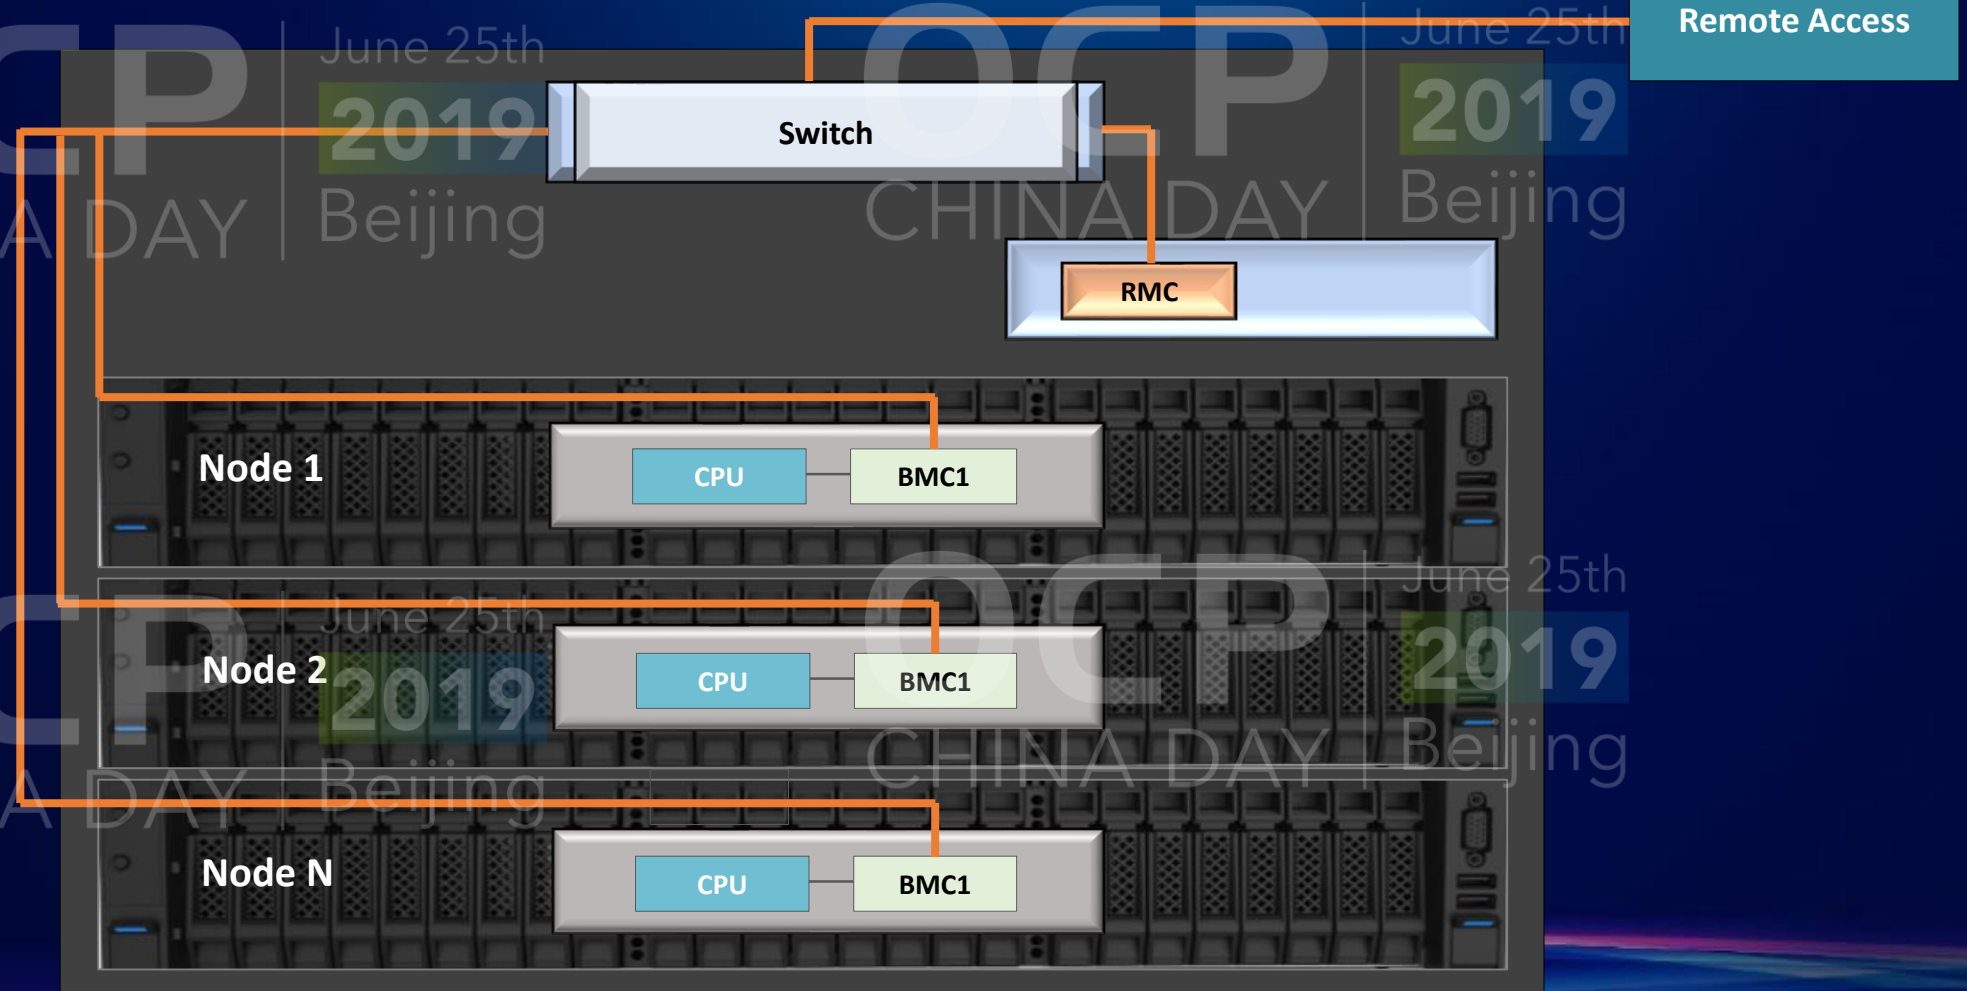

Connections Between RMC & BMC

- RMC: Rack Management Controller. MMC: Medium Management Controller. BMC: Baseboard Management Controller. FCB: Fan Control Board. PCB: Power Supply Control Board.
- RMC have two networks for remote management & connection to BMC. BMC have two networks in node for remote management & connection to RMC
- MMC uses IPMB over I2C connections with BMC and uses I2C connections with RMC for communications.
- MMC uses Tach/pwm/GPIO connections with FCB for fan management.
