Key Takeaways

1

A New Era in the Enterprise Market with Solid State Storage in the Forefront of modern Datacenters Driving Digital Transformation

2

NVMe SSDs have moved in the mainstream and Datacenter NVMe SSD Growth Outpaces the Market

3

Optimizing IT Infrastructure for Solid State Storage to be More Efficient, Flexible, and Scalable will be Key to Drive Future of Digital Infrastructure

OCP Workshop: Data Center NVMe SSD and EDSFF

A Media Perspective

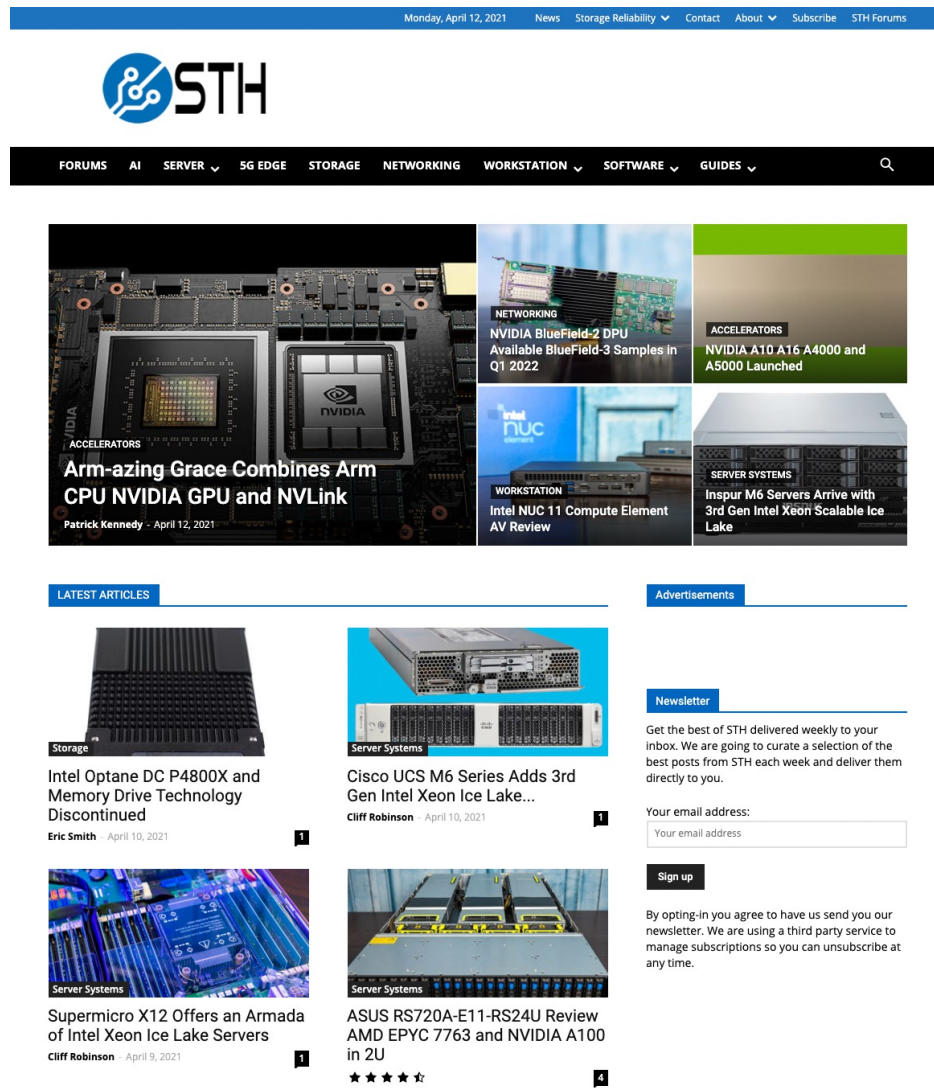

www.ServeTheHome.com

Serve The ...

STH was founded in June 2009

- Focus on the data center market, specifically server, storage, and networking
- Hardware reviews are in-data center in three Silicon Valley data centers
- Covered OCP since OCP Summit was in the Santa Clara Convention Center
- Readers come from different aspects including IT admins, programmers, procurement, "server enthusiasts"

The screenshot shows the STH website homepage. At the top, there is a navigation bar with the date 'Monday, April 12, 2021' and links for 'News', 'Storage Reliability', 'Contact', 'About', 'Subscribe', and 'STH Forums'. Below this is the STH logo and a secondary navigation bar with categories like 'FORUMS', 'AI', 'SERVER', '5G EDGE', 'STORAGE', 'NETWORKING', 'WORKSTATION', 'SOFTWARE', and 'GUIDES'. The main content area features a grid of article thumbnails. The largest article is 'Arm-azing Grace Combines Arm CPU NVIDIA GPU and NVLink' by Patrick Kennedy. Other thumbnails include 'NVIDIA BlueField-2 DPU Available BlueField-3 Samples in Q1 2022', 'NVIDIA A10 A16 A4000 and A5000 Launched', 'Intel NUC 11 Compute Element AV Review', and 'Inspur M6 Servers Arrive with 3rd Gen Intel Xeon Scalable Ice Lake'. Below the main grid, there are sections for 'LATEST ARTICLES' and 'Advertisements'. The 'LATEST ARTICLES' section includes 'Intel Optane DC P4800X and Memory Drive Technology Discontinued' by Eric Smith, 'Cisco UCS M6 Series Adds 3rd Gen Intel Xeon Ice Lake...' by Cliff Robinson, 'Supermicro X12 Offers an Armada of Intel Xeon Ice Lake Servers' by Cliff Robinson, and 'ASUS RS720A-E11-RS24U Review AMD EPYC 7763 and NVIDIA A100 in 2U' by Cliff Robinson. A 'Newsletter' sign-up form is also visible, with a 'Sign up' button and a note about using a third-party service for subscriptions.

Key Coverage Insights

Key Questions Asked from STH Coverage

Patrick's Key Insights:

- Early in cycle
- Uncertainty on scope
- Uncertainty on "winner"

Sample size: 912 e-mails + article comments
Counting instances so one email/ comment may
Have multiple summarized questions

High Engagement Rate

Coverage Statistics

- Next-gen SSD Form Factor Articles (non-review)
 - 22% longer time on page than benchmark
 - 41% higher page views in first 72 hours
 - 9% better “long tail” page views after first quarter
- Hands-on piece with Supermicro
 - #1 Video at the time

Market Perspective

2.5" seen as a "safe" choice in the industry

v.

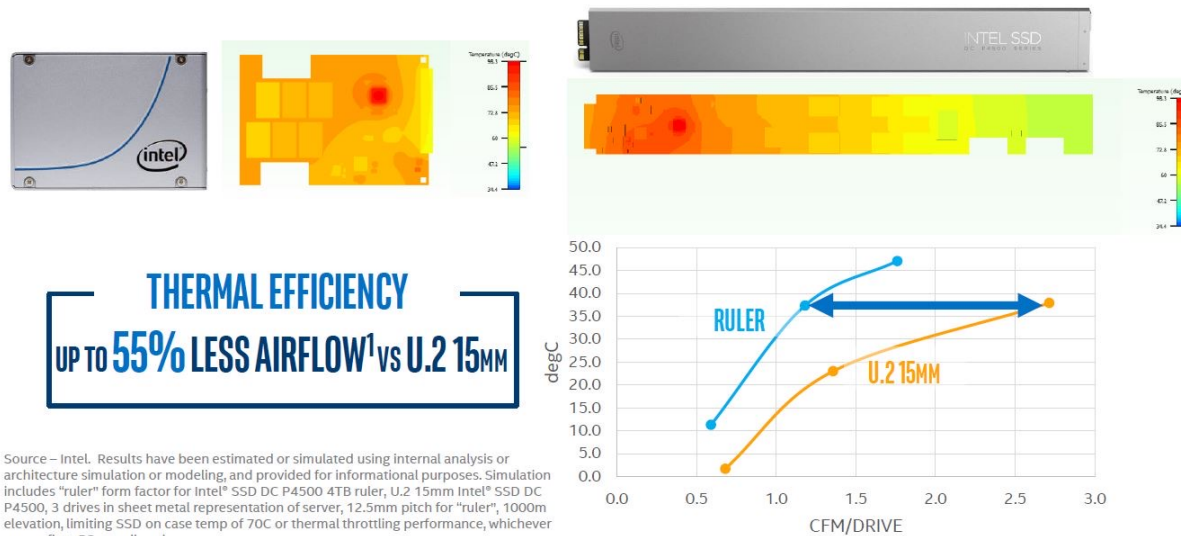

“Do I want to be an infrastructure hero?”

Market Perspective

Need benefits beyond the “ultra-technical”

Thermal Efficient Design

1. Source – Intel. Results have been estimated or simulated using internal analysis or architecture simulation or modeling, and provided for informational purposes. Simulation includes “ruler” form factor for Intel® SSD DC P4500 4TB ruler, U.2 15mm Intel® SSD DC P4500, 3 drives in sheet metal representation of server, 12.5mm pitch for “ruler”, 1000m elevation, limiting SSD on case temp of 70C or thermal throttling performance, whichever comes first. 5C guardband.

2.5” SSDs had benefits of:

- Higher reliability
- Lower latency
- Higher throughput

Why does a buyer care about thermal design?

Market Perspective

Diverging Data Center Densities

As power consumption rises, we are seeing two classes emerge. Those prepared for higher-power and those without.

Next-generation NVMe form factors such as the OCP NVMe SSD standard will be easier for hyper-scale to consume than many higher-margin enterprise customers

Closing Thoughts

- There is a surprising amount of market interest
- Now that standards are being driven, it is time to get messaging aligned
- Need a vision around the art of possible for next-gen drives

EDSFF: Meeting System Needs

Anthony Constantine

Principal Engineer, Intel

What is EDSFF?

- Multiple usages = Multiple form factors

- One connector and interface

- One common set of specifications

SFF-TA-1009

Specification for

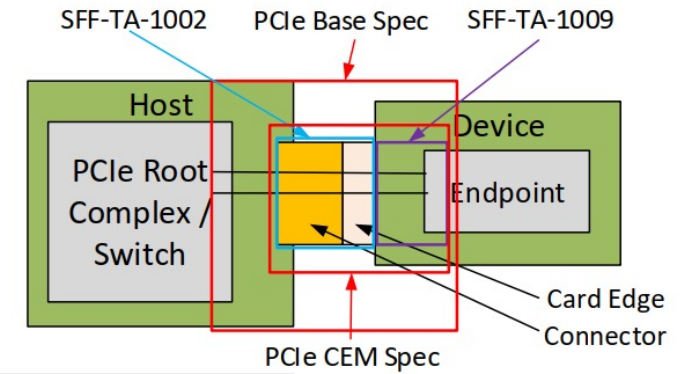

**Enterprise and Datacenter Standard Form Factor Pin and
Signal Specification**

Updates in the Specifications

SFF-TA-1009 Rev 3.0 (pin/signal spec)

- Electrical Requirements for 16 and 32 GT/s
- Lots of cleanup

SFF-TA-1008 Rev 2.0 (E3 form factor)

- Length, connector position change
- Other changes

New: SFF-TA-1023 (Thermal Characterization)

- Currently a draft
- Device characterization methodology

Expect more updates soon!

Adopt EDSFF!

Azure M&S

OCP v2.0 Major Changes

04/21/2021

Lee Prewitt - Microsoft

Memory & Storage Center of Excellence

Microsoft Confidential

04/29/21

Major Additions

- Latency Monitor (Log Identifier C3h) and Latency Monitor (Feature Identifier C5h)
- Latency Monitoring Feature Set Theory of Operation
- Unsupported Requirements (Log Identifier C5h)
- PLP Health Check Interval (Feature Identifier C6h)
- Power Loss Protection requirements
- Additional Thermal Throttling requirements
- Additional NVMe Basic Management Command requirements
- Additional Security requirements
- Additional Label requirements

New Participants

HPE and Dell Add an Enterprise Perspective

- Renamed from “NVMe Cloud SSD Specification” to “Datacenter NVMe SSD Specification”
- Support for Multiple Namespaces
- Added requirements for several more commands: Sanitize, NVMe-MI Send/NVMe-MI Receive, Write Zeros, Compare, Write Uncorrectable
- Added Device Capabilities (Log Identifier C4h)
- Added NVMe-MI 1.1b Requirements
- Component Measurement and Authentication (CMA) requirements
- Device Profiles

Device Profiles

Surprisingly Few Differences

Requirement ID	Description	Configuration Setting	
		A	B
DP-CFG-1	Factory Default Sector Size.	4096-byte	512-byte
DP-CFG-2	Number of Namespaces Supported.	NSM-4 (16 Namespaces)	NSM-5 (16 Namespaces per TB)
DP-CFG-3	Retention Time based on RETC-1 (data retention time) .	1 Month	3 Months
DP-CFG-4	NVMe Basic Supported.	R	P
DP-CFG-5	Max M.2 top side height.	FFM2-3 (top-side height)	TBD

Minor Additions

NVMe-OPT-4	The device shall only reset the Timestamp value on a power cycle.
------------	---

SMART-29	199:192	PCIe Link Retraining Count	8	This is a count of the number of PCIe Link Retraining events. This count shall only increment during run time. It shall not increment during training or power fail. This shall be cleared to zero on factory exit.
----------	---------	----------------------------	---	---

FWUP-10	Firmware activation shall not cause user data to be lost or destroyed.
FWUP-11	Firmware activation without reset shall preserve the running state of the device (e.g., Opal locking state, Set Features, etc.).

SECTOR-4	The device shall support 512-byte and 4096-byte logical block sizes.
----------	--

TTR-19	When the CC.SHN register is written to notify the device to shutdown it shall not be assumed that power will be lost even after CC.EN is cleared to 0. Under these conditions the device shall continue to function properly based on the NVMe and PCIe Specifications.
--------	---

REL-5	The AFR targets in REL-1 (MTBF of 2.5 million hours) and REL-2 (MTBF of 2.0 million hours) shall be maintained up to a continuous reported composite temperature of 77°C (170 °F) (WCTemp) with less than 1% of the device lifetime above WCTemp.
-------	---

GFF-6	A CAD file of each supported form factor shall be provided.
-------	---

PWR-8	A device shall not consume more power than the PCI-SIG Slot Capabilities register Slot Power Limit regardless of other settings (e.g., PSD in NVMe) and report Entry and Exit Latencies of FFFFFFFFh for all Power State Descriptors above the Slot Power Limit.
-------	--

FFE1S-12	A x4 device shall only have a 1C connector.
----------	---

DEVLMT-1	The device shall not have any restrictions on the number of times any of the following events can occur: Firmware downloads and activation supported. See FWUP-2 (number of firmware downloads) ; or Changing password when taking/changing ownership via TCG; or Crypto erase or block erase (format); or Power cycles; or Set/get features (including power state changes); or Log page or debug log retrievals.
----------	--

FFE1L-12	A x4 device shall only have a 1C connector.
----------	---

Datacenter NVMe SSD Specification Benefits

- ❖ Aligns SSD needs and requirements between Hyperscale/OEMs and SSD makers
- ❖ What is included in the specification?
 - NVM Express
 - PCI Express
 - SMART Logs
 - Reliability
 - Thermal
 - Power
 - Security
 - Form Factor
 - SMBUS
 - Tooling
- ❖ *Everything Needed to build a Datacenter NVMe SSD*

➤ ***Datacenter NVMe SSD and E1.S:

E3.S ENABLES NEXT-GEN DEVICES AND OPEN NVME SSD SPECS

Paul Kaler, Future Storage Architect

E3.S ENABLES EASY TRANSITION TO NEXT-GEN DEVICES

- E3.S 2U designs can share a chassis with existing form factors
 - Support both E3.S and 2.5” drive cages for easy customer transition—mix SAS/SATA/NVMe
 - Swap two E3 thins for one E3.S 2T (thick)
 - Intermix NVMe and CXL devices
 - Shared bays increases flexibility and reduces cost
- Supports large FPGA and SoCs
 - Future devices types (e.g., NIC, TPU/GPU, CSD)
- E3.S better airflow and thermals than 2.5”
 - Enables higher TDP downstream components
 - Higher performance devices

E3.S ENABLES EASY TRANSITION TO NEXT-GEN DEVICES

- Smaller connector enables smaller backplanes—reduces airflow impedance
- Better thermals enables up to 40W for E3.S 2T
 - Enables full saturation of PCIe Gen5 x4 NVMe and CXL devices
 - Provides thermal room to grow for PCIe Gen6 performance
- Cost effective performance scaling
 - Mix E3.S thin and thick to optimize performance without requiring PCIe switches
 - Higher MTBF & lower solution cost
- E3 thin enables excellent performance density for 1U as well
 - 20 drives for 2x the IOPS and bandwidth compared to 2.5”

OCF DATACENTER NVME SSD SPECIFICATION BENEFITS

- HPE has traditionally developed custom firmware specifications for drives to achieve critical benefits:
 - Ensure consistent behavior
 - Assurance of Supply – consistent behavior enables multi-source
 - Faster issue resolution by specifying additional telemetry and metadata logs
 - Improved quality – spec out best practices from lessons learned
- HPE sees significant commonality with the features and requirements specified in the Cloud spec
- Leverage to drive economies of scale and improve quality
- Open requirements enable more complete 3rd party compliance tests
- HPE, Dell, Facebook, and Microsoft are working towards a common spec for both Enterprise and Cloud use cases which encompasses new form factors like E3.S – part of the EDSFF family
- Almost Complete! We hope to be releasing the final Datacenter NVMe SSD Specification very soon.

**Hewlett Packard
Enterprise**

THANK YOU

Paul Kaler, Future Storage Architect

EDSFF E3 Form Factor

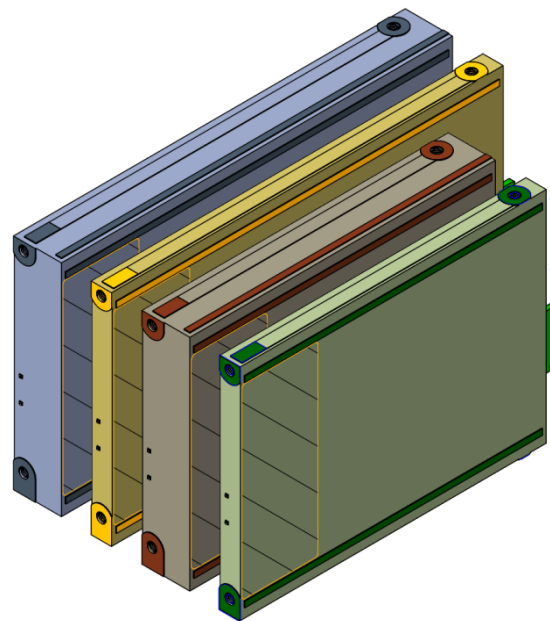

More than just SSDs

Bill Lynn – System Architect

D~~ELL~~EMC

E3 - Flexible Form Factor

- Family of devices allows multiple device types with different power profiles
- Common device bay mechanics (smaller devices fit into larger device bays)
- Supports multiple link widths (x2, x4, x8, and x16)
- Requires a mechanical device carrier which allows for OEM ID customization

1U E3 Example Chassis Configuration

Future Device Types

- Moving the E3 connector to 19.54mm allows for the use of a 4C+ connector used by OCP 3 NIC
- Allows standard networking connectors in an E3 2T form factor
- Allows for potential future higher power devices

Additional connector space could be used for a 4C+ or a higher power connector tab

E1.L Storage Reimagined.

Scalable, thermal efficient, and dense, E1.L is a building block for high-volume storage. E1.L allows increased storage density, scaling, improved serviceability, and more efficient cooling optimized for 1U servers.

E1.L optimized for capacity storage

System Level Design Principles	Benefit
Integrated drive enclosure, customizable LEDs, and latch for servicing	Better serviceability, manageability, and removes cost from server
Fully passive backplane	Reduced complexity increases reliability, lowers cost
Optimized PCIe routing - No cables, no PCIe AICs to connect SSDs	Lower cost attach per drive, better signal integrity
Simplified enclosure management	For servicing drives and reducing downtime

EDSFF E3 for Dummies

- E3 is a family of four form factors with a common 76mm height

- **E3.S**

- 76mm x 112.75mm x 7.5mm
- Target to support from 20W to 25W
- Optimized for primary NAND storage in Servers

- **E3.S, 2x**

- 76mm x 112.75mm x 16.8mm
- Target to support from 35W to 40W
- Support for higher power devices like CXL based SCM

- **E3.L**

- 76mm x 142.2mm x 7.5mm
- Target to support up to 40W
- Support for higher capacity NAND storage

- **E3.L, 2x**

- 76mm x 142.2mm x 16.8mm
- Target to support up to 70W
- Support for higher power devices like FPGAs and accelerators

Note* - A thick device will fit into two thin slots

- A short device will fit into a long slot

2U 2S Spread – E3.S x 7.5 & 16.8

24 x U.2 SSD

23 x E3 Short/Thick

46 x E3 Short/Thin

Baseline

1U 2S Spread – E3.s x 7.5 & 16.8

10 x U.2 SSD

20 x E3.S 7.5 mm (Vertical BP)

10 x E3.S 16.8 mm (Vertical BP)

OCP NVMe SSD and EDSFF Workshop

April 27, 2021

KIOXIA: OCP NVMe SSD and EDSFF Workshop

OCP

- KIOXIA has had a long-term relationship
- Active participation since inception
- Provided significant feedback for improvement

SNIA

- KIOXIA is an active participant in SNIA SFF organization, previously on EDSFF consortium
- Planning other EDSFF compliant form factor apart from E1.S

KIOXIA

- KIOXIA announced industry's first PCIe[®] 4.0 SSD using OCP NVMe SSD spec*
- Keenly listening to enterprise customers as well
- Opportunistically promoting OCP NVMe SSD Cloud spec

Industry Alignment on Product Requirement is a Win-Win!

KIOXIA XD6 Series Features

E1.S 25mm

E1.S 15mm

E1.S 9.5mm

Next Generation Hyperscale Data Center Optimized PCIe SSDs

- Proprietary KIOXIA architecture, controller, hardware and firmware purpose-built for hyperscale environments

OCP NVMe Cloud SSD Design

- Meets form factor, performance, power & thermal requirements
- Enables customers to take advantage of economies of scale

Excellent QoS and Reliability

- Consistent performance, latency and reliability in demanding 24x7 data center environments

Specifications

Form Factor	E1.S 9.5/15/25mm		
Flash Memory Type	BiCS FLASH™ 3D TLC Flash Memory		
Interface Specification	PCIe® 4.0 x 4L, NVMe® 1.3c		
Performance			
User Capacity*	GB	1,920	3,840
Sequential Read 128KiB* (QD=32)	MB/s	6,500	
Sequential Write 128KiB* (QD=32)	MB/s	1,250	2,400
Random Read 4KiB* (QD=256)	KIOPS	660	850
Random Write 4KiB* (QD=128)	KIOPS	50	90

*KIOXIA Corporation definition of capacity: 4 KiB = 4,096 bytes, 128 KiB = 131,072 bytes, GB = 1,000,000,000 (10⁹) bytes and a terabyte (TB) as 1,000,000,000,000 bytes (see end of presentation for full capacity disclaimer). Subject to change

"Developing and deploying flash based products is very challenging. EDSFF E1.S is the next generation of flash form factors with its superior thermal, performance, serviceability and scalability compared to solutions today. In addition to this, the OCP based NVMe Cloud SSD Specification is a great step forward for aligning the SSD providers with hyperscale needs. XD6 support of these next generation flash needs is a great step forward for meeting hyperscale needs for now and the future." Ross Stenfort, HW Storage Engineering @Facebook, Inc.

KIOXIA

Definition of capacity: KIOXIA defines a megabyte (MB) as 1,000,000 bytes, a gigabyte (GB) as 1,000,000,000 bytes and a terabyte (TB) as 1,000,000,000,000 bytes. A computer operating system, however, reports storage capacity using powers of 2 for the definition of $1\text{GB} = 2^{30} = 1,073,741,824$ bytes and therefore shows less storage capacity. Available storage capacity (including examples of various media files) will vary based on file size, formatting, settings, software and operating system, such as Microsoft Operating System and/or pre-installed software applications, or media content. Actual formatted capacity may vary.

EDSFF SSD Portfolio

Single connector and pinout for FF family – overall industry benefit

E1.L 18mm & 9.5mm

High Capacity Storage – 1/2 PB in 1U

- 1U optimized
- Improved manageability and serviceability
- High density and improved data center TCO

E1.S

Up-to 24 SSDs in a 1U Server

- High-performance server optimized
- Hot-plug and serviceability
- Power and thermals for mainstream SSDs (2TB – 8TB)

Improved SSD density, thermals, power and scalability

Datacenter NVMe™ SSD Specification

- Common drive specs help the ecosystem

Datacenter NVMe™ SSD Specification

Encourages industry
collaboration and
discussion

Standardization of the
common features

Improved Time to
Market

Improved understanding
of the cloud requirements

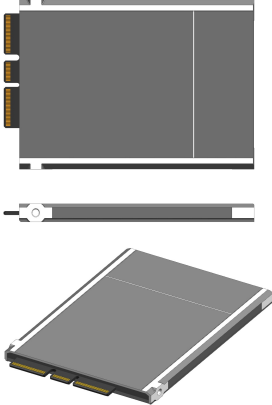

Enables open source
tools to manage the SSDs

Samsung SSD OCP NVMe SSD and EDSFF Workshop

Samsung EDSFF is ready

Model	PM9A3	PM1743
Cell Technology	V6 TLC	V6 TLC
Interface	PCIe Gen4 1x4	PCIe Gen5 1x4, 2x2
Form Factors	E1.S 9.5mmT, 15mmT, 25mmT E1.L 9.5mmT	E3.S 1T
Endurance	1 DWPD	1 DWPD
Features	 <ul style="list-style-type: none"> • Optimized performance and latency for hyperscale environments • Improved health monitoring and debugging features • Enhanced security features 	 <ul style="list-style-type: none"> • High performance PCIe Gen5 SSD for enterprise applications • Provides enhanced data encryption and attestation
Recommendation	For hyperscale datacenter, M.2 → E1.S/E1.S	For enterprise Server/Storage, U.2 → E3.S
Schedule	Available now	Available in Q2'22

Notes: All product plans and roadmaps are subject to change without notice.

Samsung supports OCP NVMe SSD v1.0

PM9A3 Available Now!

E1.S form factor

Health Monitoring

Telemetry for failure analysis
Capacitor health log
Firmware activation history
Performance monitoring log

Reliability

UBER < 1sector per 10^{17} bits read
End to end data protection
MTBF 2.0million hours
Global wear-leveling

Security

AES-XTS 256 bit encryption
Anti-rollback protection, TCG Opal
Secure boot, Key revocation

NVMe CLI Plug-in

- ✓ *Less Risk during SSD dev with combined requirements*
- ✓ *Enables to manage massive SSD at rack-scale*
- ✓ *Enhances security and data protection to solve today's datacenter challenges*
- ✓ *Expedites failure analysis with open-source tools*

	PM9A3	Capacities	OCP v1.0
Form factors	E1.S	1TB-8TB	Support
	E1.L	16TB	Support
	M.2	1TB-4TB	Support
	U.2	1TB-16TB	Support

Notes: All product plans and roadmaps are subject to change without notice.

Micron and OCP: Aligned Values

Acceleration Catalysts

Solving difficult problems with open and innovative developments. Micron continues to accelerate solutions with our public, open, [validated reference architectures](#).

Focus on Efficiency

OCP's focus on efficiency – in energy use, cost, design and space use is tightly aligned to [Micron's sustainability commitment](#).

Align and Contribute to Open Industry Standards

Micron demonstrated our belief in the universal benefits of open designs when we released our [Heterogeneous-Memory Storage Engine](#) to the open-source community.

Uniform, complete standards help democratize data and drive responsible business practices and continuity.

Micron and OCP: What's Next

Broad form factor range consolidates around demand-driven standards

EDSFF: Accelerating Adoption

Industry sees value in form factor optimization for flash

E1.S dominant EDSFF variant

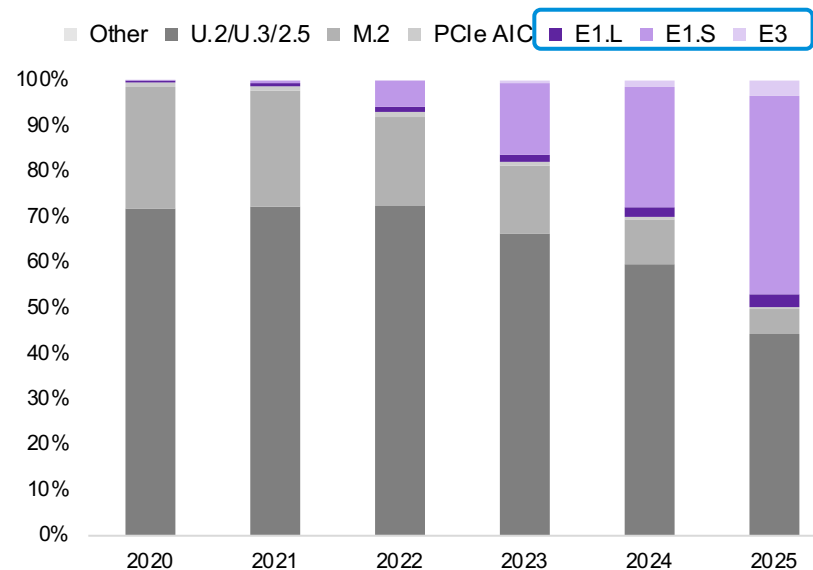

Consolidation is coming:

Industry can't sustain offering 11 form factors (in addition to long tail of legacy form factors)

Near term: Micron sees focus around E1.S

Longer term: E1.S still dominant, E1.L support for large capacities and E3 growth aligned with PCIe Gen5

Coming Form Factor Shift

Units: user PB

Flash-optimized Flexibility

Datacenter NVMe SSD Spec Enablement

- **Datacenter NVMe SSD Spec enables a SSD supplier to build more common HW/FW for users**
 - Existing standard spec allows a high level of flexibility so users could choose many different directions from others
- **Security requirement is enhanced across the board**
 - Secure boot, Authentication and transaction path security requirements become clear and robust
- **However, there's some scope to improve going forward**
 - Depending on users, unused features could be categorized as mandatory and this may add burdens to suppliers
 - Spec update frequency may need to be managed to be predictable to help the efficient product-planning

SKhynix Products Supporting DC NVMe SSD Spec

- **SKhynix has been offering products that support the Datacenter NVMe SSD spec**
 - PE8111 E1.L and PE8110 E1.S are developed based on the Datacenter NVMe SSD spec v1.0a and those are being shipped to customers
 - New products coming up next aim to meet DC NVMe SSD Spec V2.0
- **PCIe Gen5 SSDs are expected to be developed in EDSFF form factor and Datacenter NVMe SSD spec**
 - Not only E1.S/E1.L but E3 SSD is being planned for PCIe Gen5 and it will be based on version 2.0

	E1.S 15mm	E1.L 18mm / 9.5mm	E3.x (TBD)
Product	PE8110 	PE8111 	Next generation  (source: SNIA)
Interface	PCIe Gen4x4	PCIe Gen3x4	PCIe Gen5
Capacity	1920GB – 7680GB	15360 – 30720GB	TBD
Read / Write Bandwidth	6500 / 4400 MB/s	3550 / 3300 MB/s	TBD
Read / Write IOPS	1100 / 160 KIOPS	750 / 105 KIOPS	TBD

Datacenter NVMe SSD Validation

Microsoft - Adam Guy

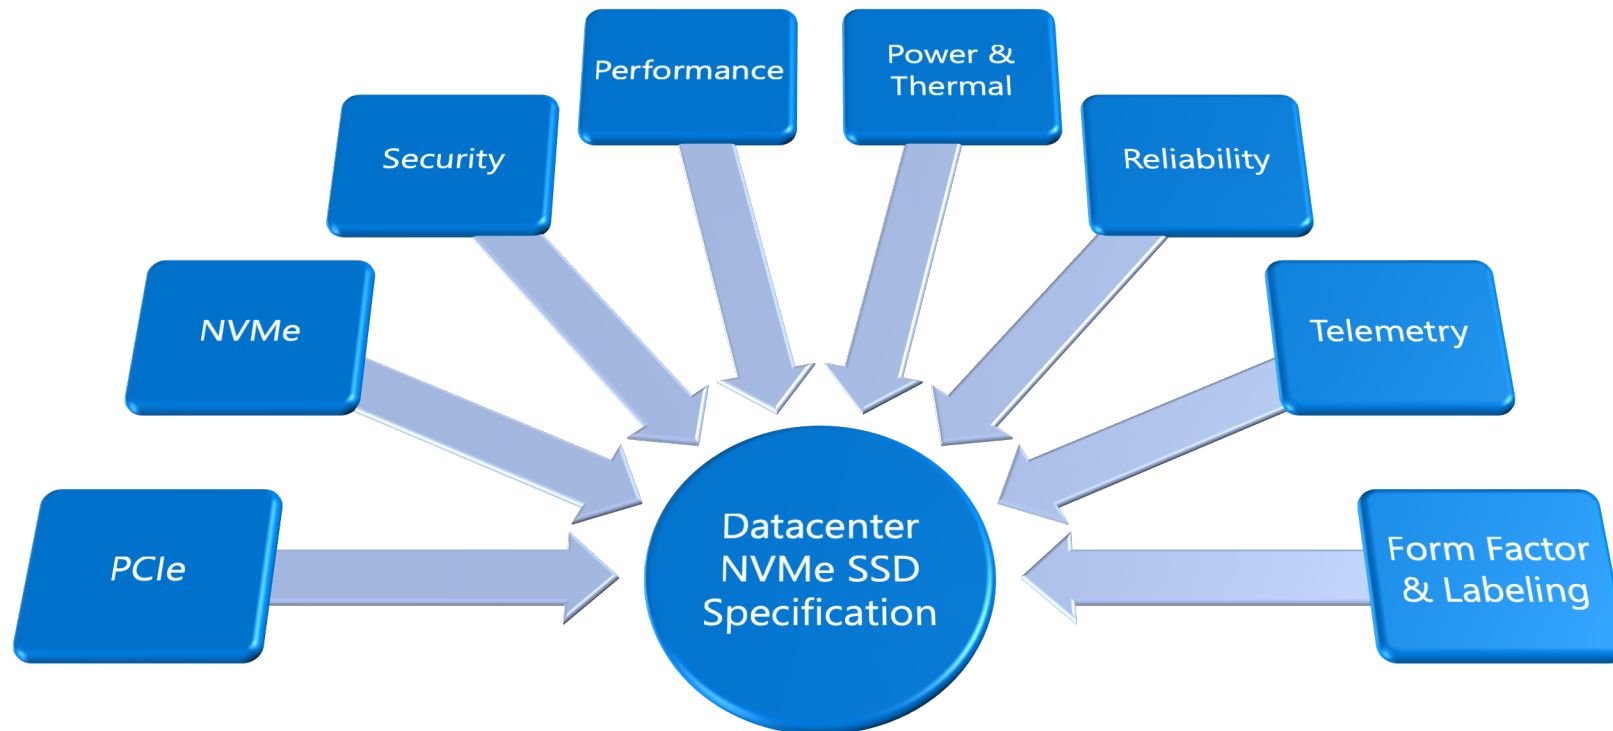

Teledyne LeCroy - Nick Kriczky

UNH-IOL - David Woolf

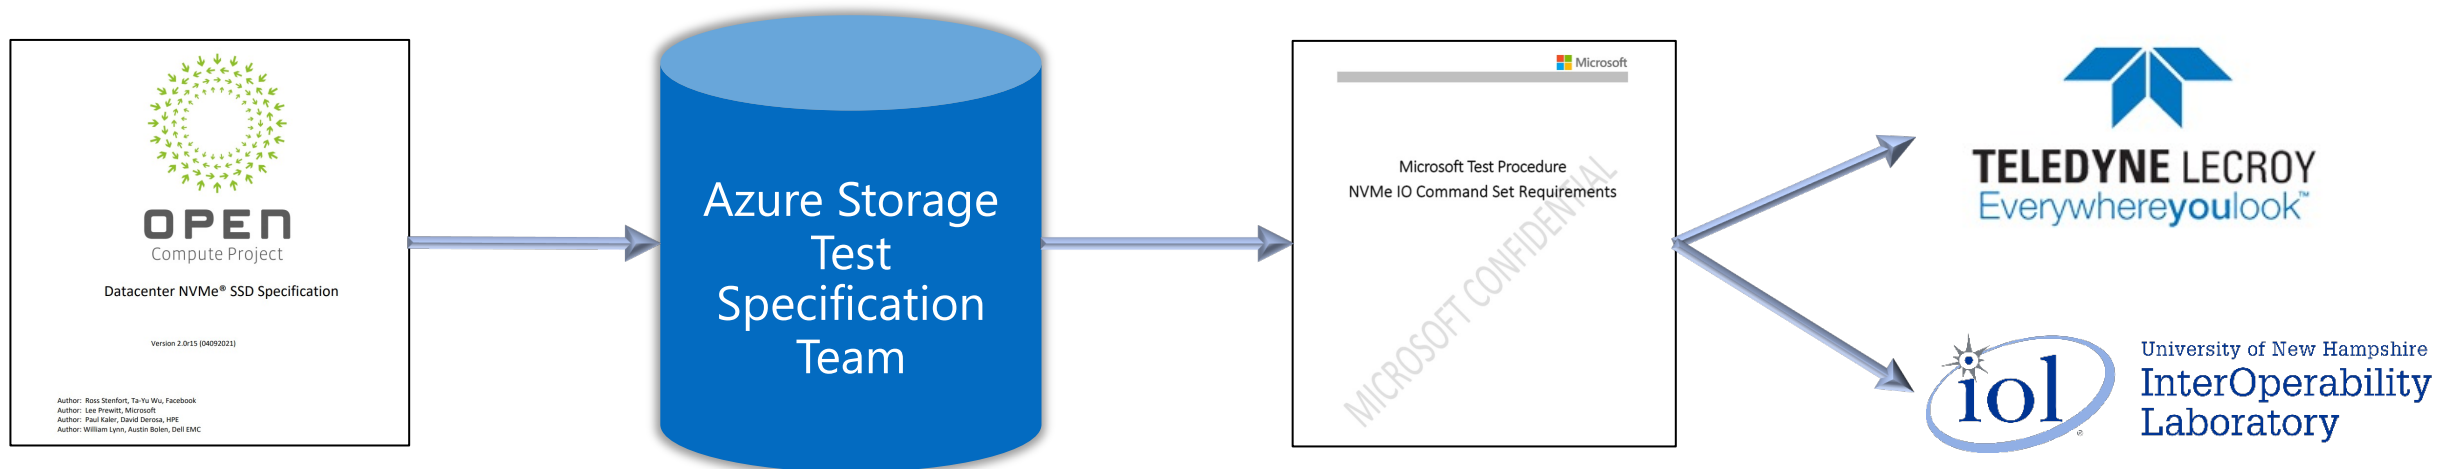

Datacenter NVMe SSD Test Strategy

- ✓ Validation against the Datacenter NVMe SSD Specification ensures the target device complies with the wide array of common requirements across multiple datacenter customers
 - ✓ Common & deterministic SSD functionality in-system
 - ✓ Numerous datacenter opportunities from one leveraged SSD design

Datacenter NVMe SSD Test Strategy

- ✓ Test suites for Datacenter NVMe SSD Spec compliance are in-progress
 - ✓ First intercept is revision 1.0a
- ✓ Microsoft is generating initial test specifications mapping to requirement ID's
 - ✓ Test specifications only apply to requirements that can be validated in a black box fashion
- ✓ Test specs are subsequently reviewed & approved by key stakeholders
- ✓ Test case implementation based upon approved test specifications
 - ✓ 1.0a effort currently in-progress at Teledyne LeCroy and UNH-IOL, independently

UNH-IOL Tool Support for DatacenterSSD

- UNH-IOL published [test plan for DatacenterSSD](#) in mid 2020, and is actively working with key stakeholders on adding and upgrading tests.
- DatacenterSSD spec explicitly requires NVMe v1.4 compliance, therefore, UNH-IOL INTERACT Test Tool, currently widely used for NVMe v1.4 compliance, has integrated add-on support for DatacenterSSD compliance into a single tool.

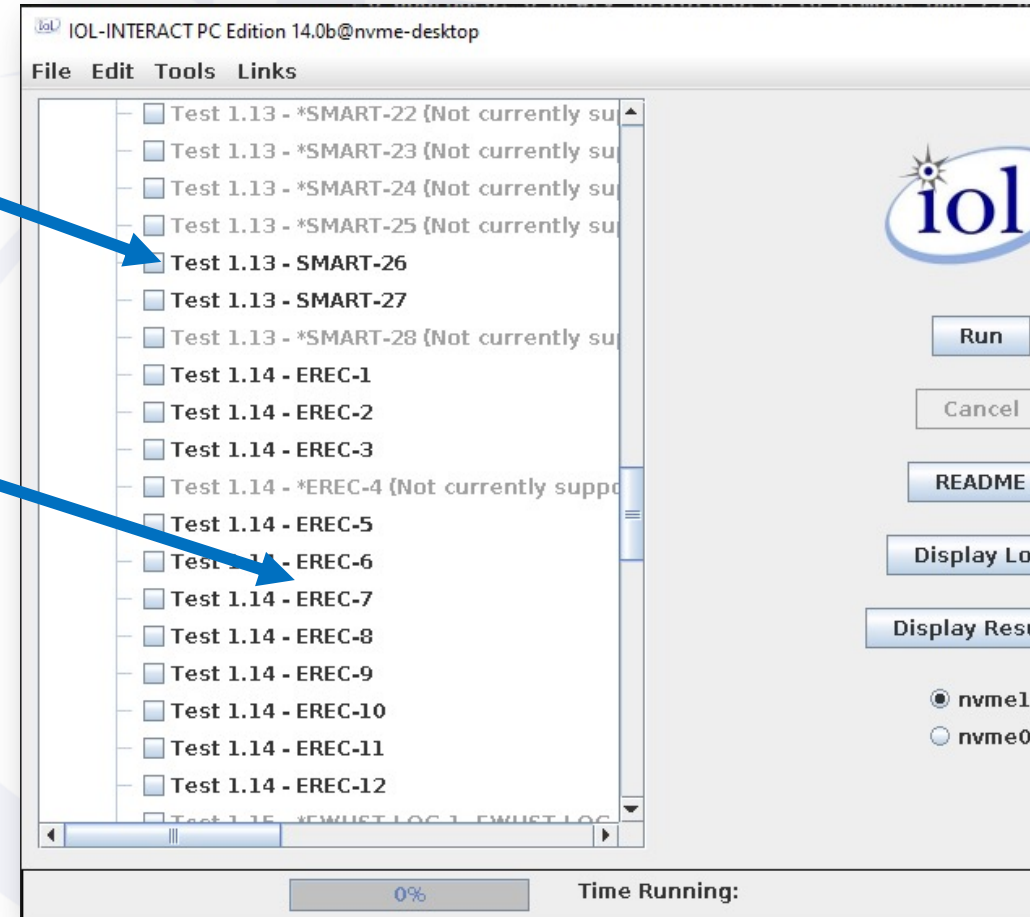

UNH-IOL Tool Support for DatacenterSSD

UNH-IOL INTERACT Test numbers correlate to Test Plan

UNH-IOL Test names correlate directly to DatacenterSSD Spec

DatacenterSSD tools currently being demonstrated at customer sites
